

COPYTHORNE PARISH COUNCIL MEETING – TUESDAY JULY 11th 2023

Item 9 - NE Quadrant Conservation Area Review Update June 2023

Introduction and background

The last formal meeting of the NE Conservation Area review body took place back in October last year. As additional background please see the attached copy of my report of that meeting and its supporting documents delivered as Item 13 at the December 13th 2022 Parish Council meeting and now titled as “Appendix A”.

Since that time, it appeared little had happened, there having been no more formal meetings and little contact with the NPA. One thing of note is the inclusion of our Parish Telephone boxes on the Local Listed Buildings list.

After a chat, at a chance meeting with a Netley Marsh parish councillor, elicited that Netley Marsh had been in contact with the NPA about the possibility of altering the existing conservation area boundary in their parish. It reminded me that the NPA had said at the last review it would run walkabouts with the individual parishes to demonstrate the sorts of features/characteristics to look out for during the survey work.

For our part we had agreed to begin looking through the key characteristics of and issues facing the Forest North East Conservation Area using documents taken from the existing appraisal. We said that we would use the comments and track changes functions to identify whether there are things that have changed, been missed, new challenges, or if the existing characteristics and challenges are still accurate.

Sylvia Wiggins and I had a quick look at the key characteristics, but felt that the promised walk about would be a useful scene setter before commencing any detailed work.

As some of you will know one of the three original councillors who agreed to help with the Review withdrew his support earlier in the year. At the Parish Council meeting on May 16th 2023 it was agreed that Cllr. Rachel Atherton join Sylvia and myself as the Parish Council's representatives on the review.

Way ahead

As a way of rejuvenating the process, formally write to the NPA asking for them to conduct the promised parish walkabout with councillors.

Proposal

Members are invited to approve the recommendation above

Cllr. Graham Chillcott
29th June 2023

APPENDIX A

Copythorne Parish Council Meeting – December 13th 2022

Item 13 - To receive and note a report on the latest Forest North East Conservation Area Character Appraisal Review Meeting held on 7th October 2022 and the suggested way ahead for Copythorne Parish

Introduction

The second Forest North East Conservation Area Update Appraisal meeting took place in Netley Marsh Parish Hall on 7th October 2022. Present were members of Netley Marsh and Copythorne Parish Councils along with representatives of the National Park. Please see attached e-mail from Emily Dee (NFNPA Building and Conservation Officer) giving brief details of what was agreed at the meeting (appendix 1).

What is involved in the Review

The initial approach will be to have a “light touch” as it’s believed by the NPA that little has changed since the previous review published in 2009. The survey work will consider: - Local listing, Trees/Hedgerows, and the Conservation Area Boundary. The survey work will culminate in an addendum to the Conservation Area Character Appraisal. To support this survey, work the NPA will run walkabouts with representatives of Netley Marsh and Copythorne parishes to demonstrate the sorts of features/characteristics to look out for during the survey work. The NPA will also give a presentation setting out the scope and strategy of the work to the Netley Marsh /Copythorne Parish Councils early in the New Year.

Attached is a paper listing the key characteristics of a conservation area (appendix 2) and also a paper listing other issues affecting the conservation area (appendix 3).

An extract from the Local Listing report for “Hazelmere” Southampton Road prepared by the NPA in support of its application for local listing, is attached as an example of the criteria required for a local listing (appendix 4).

For our part as your representatives Cllrs. Chillcott, Goodwin and Wiggins suggestion is that our approach to the survey work is to divide up Copythorne Parish into its 6 villages, starting with Bartley. Then using a map showing the current conservation area, listed buildings, ancient monuments and locally listed non heritage assets, overlay on this the assets we believe should be added to the non heritage assets list and at the same time noting any possible changes to the conservation area boundary.

For information I have also attached a list of Listed Buildings and Scheduled Ancient Monuments (appendix 5) and a paper listing current Local Non-designated Heritage Assets (appendix 6). (NOTE: Both cover the Parish and not just the Forest North East Conservation Area)

Next steps

1. To ask the NPA to make a presentation to Council early in the new year on the scope and strategy of the work
2. To have a preliminary walk round Bartley to familiarize ourselves with the layout of the land.
3. To undertake a walkabout with the NPA to better understand the features and characteristics to look out for
4. Undertake a survey of Bartley noting assets that we believe should be added to the non designated assets list and any suggested changes to the conservation area boundary

Cllr. Graham Chillcott
15th November 2022

Appendix 1

From: Emily Dee (NFNPA)

Sent: 12 October 2022 15:16

Subject: FNE Conservation Area Review meeting actions

Dear All,

Thank you for meeting us on Thursday evening last week to discuss moving the Conservation Area Review work forward.

Below is a quick summary of what was agreed:

The overall approach to the review is to be light touch, as there has been limited change in the area and many of the problems discussed at the meeting were picked up in the original Appraisal.

Work will begin with each parish looking through the key characteristics of and issues facing the Forest North East Conservation Area (see attached documents) taken from the existing appraisal. They will use the comments and track changes functions to identify whether there are things that have changed, been missed, new challenges, or if the existing characteristics and challenges are still accurate.

Following this the parishes will start some survey work individually to refresh and add to the appraisal. To support this the NPA will run walkabouts with the individual parishes to demonstrate the sorts of features/characteristics to look out for during the survey work. The NPA will also give a presentation to the Copythorne Parish Council, setting out the scope and strategy of the work (this can also be done for Netley marsh if requested).

The survey work will consider: Local listing, Trees/Hedgerows, and the Conservation Area Boundary. Copythorne plans to undertake a survey of the area village by village as a way of breaking up the work. Netley Marsh it yet to decide on a strategy for breaking up the survey work. The NPA will provide maps to aid the survey work.

This work will culminate in an addendum to the Conservation Area Character Appraisal. Formal public consultation would only be triggered if there were fundamental changes to the Conservation Area, such as the boundary changing. However informal public engagement is important and encouraged as part of the review process; Parish Councils and news letters are a useful way to communicate with residents the scope and progress of the work.

So as a first point of action, as discussed at the meeting, please can I ask that the Parish Councillors involved in the project provided us with suitable contact email address each for more direct communication.

Please can you also have a look at the attached documents and comment/track change as appropriate. If you have any trouble accessing the documents, please let me know.

Once I have heard back from you, I will be in touch to organise a suitable date for a walk around your parishes.

Best Wishes,

Emily Dee
Building Design & Conservation Officer
National Park Authority

Appendix 2

Key characteristics of the conservation area

- Historically most of the land was outside the Royal Forest.
- Consists of a number of enclosures of medieval, post medieval, 18th and 19th century date.
- Site of medieval manor and estates in the north of the area.
- The majority of the historic development is represented by isolated farmsteads or small cottages.
- 19th century development is generally linear in nature, forming areas of ribbon development along roadsides.
- More modern development has consolidated areas of ribbon development.
- Hedge and tree field boundaries.
- Copses of trees and small areas of woodland.
- Individual specimen trees.
- Important archaeological features – Bronze Age barrows, Iron Age hill fort and Roman road.
- Irregular medieval field systems.
- Regular 19th century parliamentary field systems.
- Historic funnels on to the Forest edge to the south.
- Generally restricted views through, in and out of the conservation area.
- Most buildings are in residential use, some with supporting agricultural or equestrian outbuildings.
- A small number of higher status properties are dotted around the area and were often the original farmhouses or 19th century small country houses, with associated gardens and parkland.
- There are fifteen listed buildings or structures within the boundary, which are all listed Grade II.
- Of the listed structures a number include historic farmhouses.
- There are 158 buildings of local, vernacular or cultural interest within the conservation area boundary.
- The majority of older houses were originally small and either of single storey or of one and a half storeys in scale.
- There are a number of unconverted important agricultural buildings surviving within the conservation area.
- All the 16th and 17th century buildings have timber-frame origins.
- A small number of 18th century brick buildings with clay tile roofs survive.
- The majority of cottages and small houses date from the mid-19th and early 20th century and are generally of brick and slate in construction, facing onto the adjacent road.
- Modern development does not generally follow traditional detailing.
- Boundaries to plots are formed by hedgerows, picket fencing or simple low timber post fencing.
- Major key buildings: Church of St Mary at Copythorne, Copythorne School, By barrow, Dell Farm, Kent's Farm, James' Farm, Copied Hall Farm, Martins Farm, Winsor Mission, Tatchbury Manor, Bartley Grange, The Old Farmhouse, St. Matthew's Church at Netley, Bartley Lodge Hotel, Bartley Manor, Beechwood House and Beechwood Lodge, Martins Farm.
- Other key manmade features: banked enclosures, implement shed on Rossiters Lane, the War Memorial at Netley Marsh.

Appendix 3

Other issues affecting the conservation area

- Modern development has taken place but the intrinsic character of the conservation area and its historic character have not been significantly affected. Most of the new development has been the infilling of vacant plots within the existing plan form of the settlements. The most significant larger scale areas of development have taken the form of small groups of houses grafted onto the edge of some of the historic dispersed linear settlements. The repeat of such an approach to modern development would not be encouraged.
- The survival of the historic plan form of the settlements in the conservation area means that the capacity for new development within the boundaries of the settlements is minimal and significant new development would be detrimental to the intrinsic historic character and plan form.
- The majority of modern properties in the area are of a standard form which does not reflect the special characteristics of the earlier and more rural buildings in the area. There is the opportunity in the future for scale, massing, design and use of materials to be more carefully considered.
- The use of modern building materials and the pressures of meeting current building regulations, as reflected in the requirement for insulation and the associated use of double glazing and PVCu. This has become noticeable in the area. Type, design and profile of any replacement windows needs careful consideration if the special character of buildings in the area is to be retained.
- The requirement for new domestic outbuildings such as garages and sheds etc. can have a significant cumulative impact on an historic area. Such outbuildings can be of traditional design and materials and so make a positive contribution to the area.
- The existence of complexes of historic farm buildings may give rise to pressure for conversion of agricultural buildings to modern uses, whether commercial or domestic. It is important that any conversion scheme respects the intrinsic agricultural character of these historic buildings. These complexes of buildings are often prominent within the landscape and have a great historic relevance to the development of the conservation area.
- It is anticipated that there will be future pressure for the re-use of any previously developed land within or on the edge of the conservation area. The retention of any existing historic buildings in these areas is a key aim.
- Hedgerows and traditional rural boundaries are an important feature of the area. Their piecemeal loss has occurred and offers opportunity for reinstatement.
- Cars can dominate the landscape and detract from traditional rural character. The need for such transport in rural areas will of course continue in the future. The provision of off-road parking without the loss of boundary treatments, such as traditional walls or hedgerows, needs careful consideration.
- It is important that development on the edge or immediately outside of the conservation area boundary does not have a detrimental impact on views into and out of the conservation area.
- Two large modern caravan parks exist just outside the boundary of the conservation area and management of effective screening of these two areas from views into and out of the conservation area is important.
- Overhead wires are an unfortunate feature in the historic landscape, especially noticeable in parts of the area such as Netley Marsh, Winsor and Woodlands.

Appendix 4

Assessment criteria for inclusion on the Local List Criteria Description

1. Age An asset that displays national or local trends/practices/way of life that is representative of a historic period or changes over time. Broadly speaking the older the asset is, the rarer it is likely to be.
2. Rarity/Representativity An asset that is characteristic of the New Forest. Or a rare survival of an asset type less commonly found in the New Forest e.g., encroachment cottage or a commemorative monument.
3. Architectural/Artistic Interest The intrinsic design and aesthetic value of an asset relating to local and/or national styles, materials, construction and craft techniques, or any other distinctive characteristics. This could be an example of outstanding modern design.
4. Group value Multiple assets meeting the criteria that are linked by design or historic association. Related or designed landscapes that directly contribute to the setting of other assets should also be included under these criteria e.g., boundary walls or railings, or groups of estate buildings, terraces of cottages etc. Planning Committee 15 November 2022 PC 410/22 Local List Update 2
5. Archaeological Interest The potential for evidence of past human activity above or below ground or in the wider landscape to add archaeological knowledge e.g., Barrows, WW2 military remains etc.
6. Historic Interest The asset has links to nationally or locally notable people, events, economic trends, or social/cultural history e.g., architects such as Heywood Sumner, or Arthur Hugh Clough, munition works, or Jubilee/Millennial commemorations.
7. Landmark Status An asset that is recognised as a landmark or a communal gathering point in the local area e.g., a village green, railway station, clock tower or memorial etc.
8. Community/Social Value An asset that creates a sense of belonging and/or shared identity and is valued by its local community or other interested communities. This could be because of the history, the spiritual association or how it is/was used within the community e.g., village hall or meeting room.
